

## DeLaval milking point MP700

The parlour gateway to herd control

### **Information you can use, in the right place, at the right time**

Exactly what is needed in today's modern milking parlour where time and efficiency are at a premium. DeLaval milking point MP700 gives you all the information you need in a clear and precise manner. Plus the stylish cabinet keeps the heart of your machine clean and dry.

# DeLaval milking point MP700

## Professional products for professional farmers

### Information right where you need it

DeLaval milking point MP700 was created to give you full control over every cow's information. When connected to the ALPRO herd management system, it will give access to all cow data.

Today, information is the key to optimizing the herds performance: if a cow's performance does not meet expectations; if milk yield is significantly down; if the cow has not eaten her concentrate from the feeders; if she needs special attention when milking, and much more. DeLaval milking point MP700 will notify this with indicator lights. This allows early treatment to reduce losses and increase the speed of a full recovery.

With DeLaval milking point MP700 you can change the information on the spot. Treatment flags can be set from every milking point and you can activate the separation gates to isolate a cow right after milking. All this from the control pad, without the need to go and change the status in the management program. With DeLaval milking point MP700 you are in control.

### All in one sleek compartment

DeLaval milking point MP700 has all sensitive equipment shielded in a well designed stainless steel cabinet. This will keep dirt and splashing water away ensuring trouble-free operation, day in, day out. The smooth surface is easy to keep clean and the quiet environment will aid stress free milking for cows and operators. And it looks fantastic!

### **Flow controlled milking and automatic take off**

DeLaval milking point MP700 includes all you need for easy and efficient milking. The electronic Duovac will ensure that every cow is milked according to her physiological state. Gentle and stimulating when there is no milk flow, fast and efficient during milking, and gentle reconditioning of the teat when milk flow is coming to an end. Duovac promotes fast and complete milk-out to prevent illness and safeguard your income.

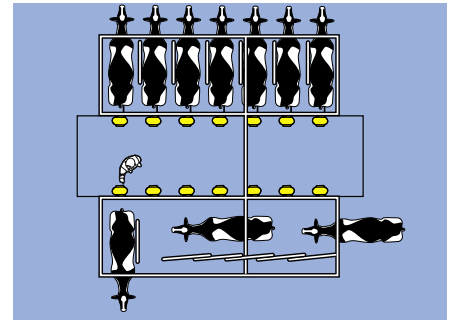

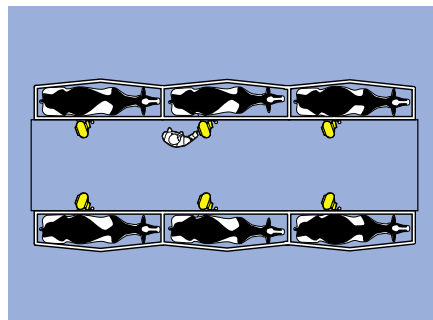

### **Easy service**

With DeLaval milking point MP700, service and trouble shooting are easy. It secures your operation with reliable functionality and, in case of trouble, less downtime.

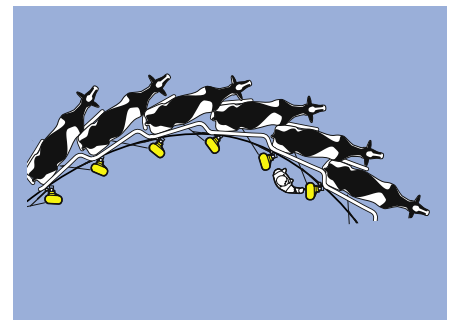

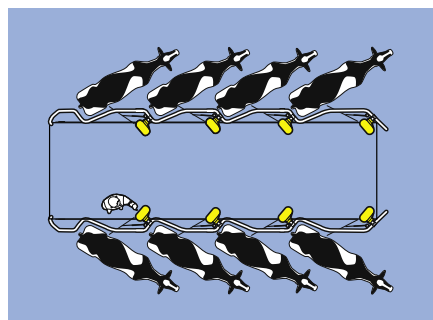

## The best choice

DeLaval milking point MP700 fits most common parlour types. Its position can be adjusted to create a comfortable working environment for you and your milking staff.

## Easy and fast installation

DeLaval milking point MP700 comes pre-assembled. Installation is fast and easy. Upgrading your parlour will take less time and you will be up and running your daily business as soon as possible.
